

ANNOUNCEMENT TO THE AUSTRALIAN SECURITIES EXCHANGE: 28 APRIL 2017

MARCH 2017 QUARTERLY ACTIVITIES REPORT

HIGHLIGHTS

- **Continued support from majority shareholder**
- **Advancement of sale of interest in Sapex**
- **Continuation of negotiations with potential strategic partner to develop both beneficiation plant and furnace facility at Kulon Progo**

Activities for the Indo Mines Limited ('Indo Mines' or 'the Company') group during the March 2017 quarter included the following:

Continued support from majority shareholder

Indo Mines is pleased to announce the financial support of the Company's majority shareholder, Rajawali Corpora ('Rajawali'), as the Company progresses discussions with a potential strategic partner in developing a trial smelter facility at the Company's Kulon Progo project. A Letter of Support and financial assistance through two working capital facilities, one for US\$150,000 and one for US\$750,000, will be provided by Rajawali until 30 June 2017 to cover any working capital shortfall arising whilst negotiations are completed. Rajawali has consented to this support based on the advanced stage of the negotiations.

Finalisation of financial support documentation will allow the Company to release its half year report and at that point the Company expects to request the ASX to lift the suspension of trading of the Company's shares.

Sale of interest in Sapex Oilfield Services Limited

As previously stated, Indo Mines is in advanced negotiations to sell a portion of its holding in Sapex Oilfield Services Limited ('Sapex') – this is currently being progressed via a capital markets transaction and this is anticipated to be completed in May, at which point details will be provided to shareholders.

Advancement of negotiations with potential strategic partner

Indo Mines subsidiary, PT Jogja Magasa Iron ('PT JMI') and its local partner PT Jogja Magasa Mining have been in discussions with a potential strategic partner since September 2016. Although specific details cannot be provided at this stage, a basic outline of the potential deal structure is provided below.

First stage of the partnership will see development of a trial furnace facility to process Kulon Progo iron sands to finished steel. The strategic partner would finance and develop the furnace facility utilising their technology to process the iron sand concentrate. To provide feedstock to this facility PT JMI would develop a beneficiation plant.

Key advantages of this structure include the following;

1. Lower capital cost commitment and financial raising would be required from PT JMI.
2. Removes the need to obtain an export license for iron sand concentrate.
3. Allows retention of the existing Contract of Work and removes the need to convert to an IUPK license.
4. PT JMI can focus on the less technically sensitive mining and beneficiation rather than the hot-metal and steel production process.
5. The project is developed on a modular basis, and capacity can be increased as market conditions allow.
